

Protected Urea - Fertiliser Planning in 2022

*Mark Plunkett,
Johnstown Castle*

What is Protected Urea?

- Urea + Inhibitor
 - NBPT or NBPT & NPPT
- Stabilises the conversion of Urea to Ammonium
 - Urea – 15.5% N
 - Pro Urea – 3.3%
- 12% more effective N
- 10% cut in N limits

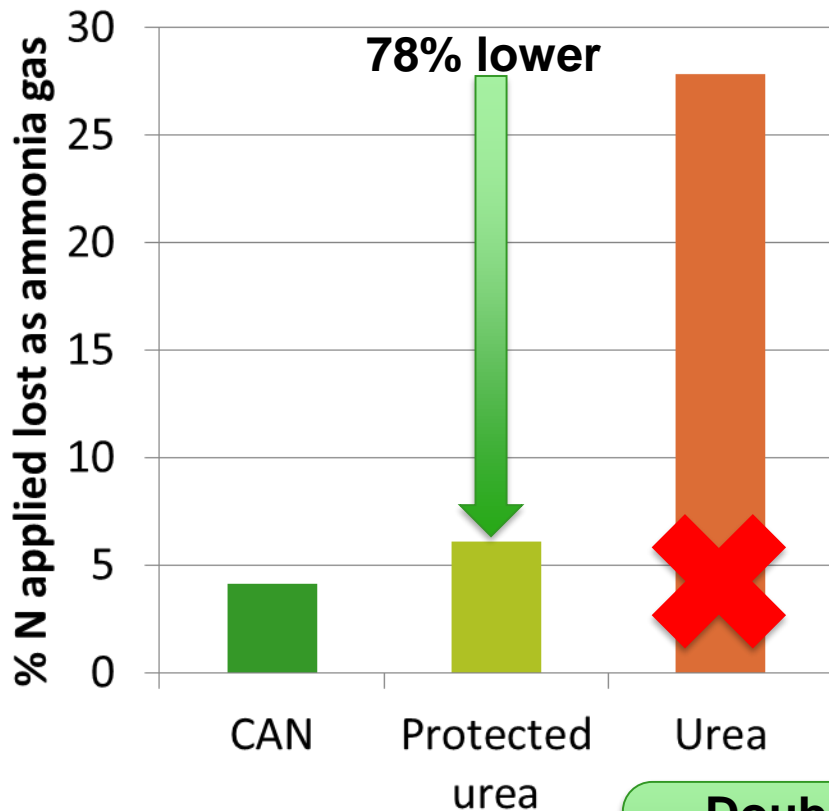

Why Protected Urea? Emissions

Urea to Protected Urea

CAN to Protected Urea

Ammonia Emissions

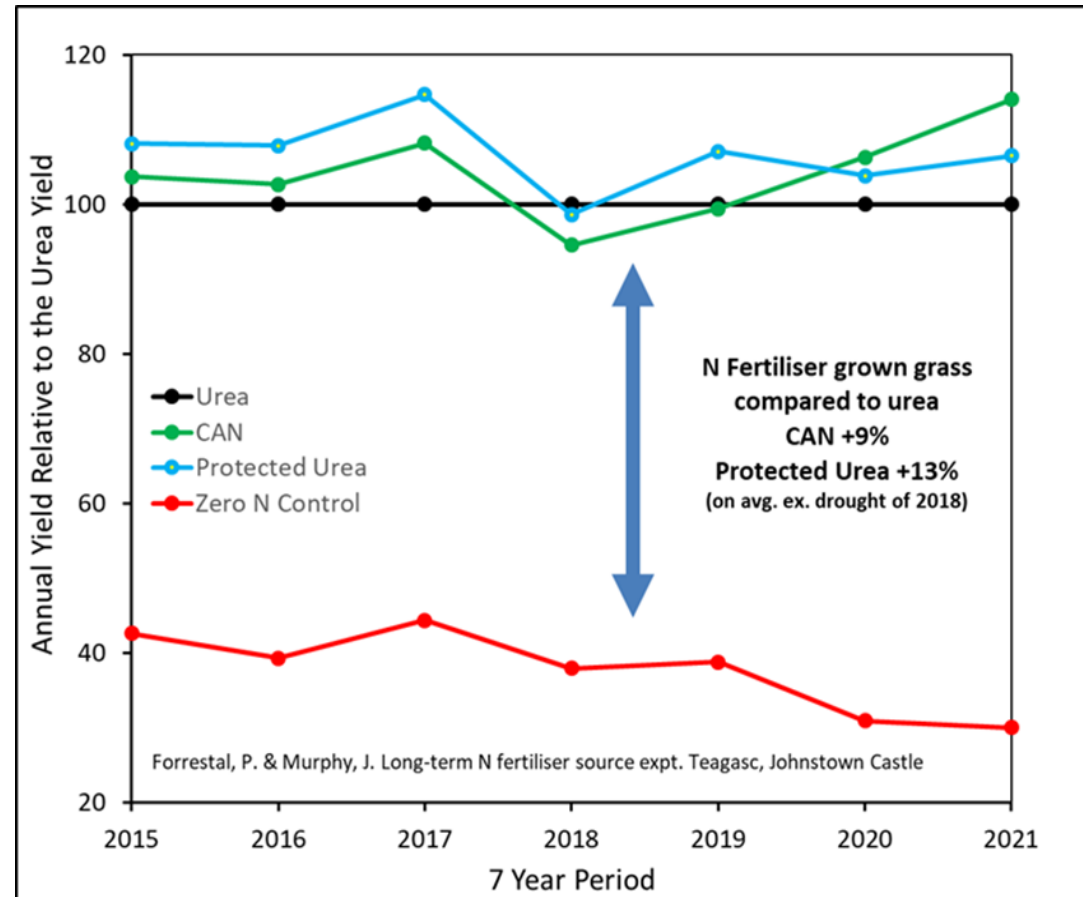

GHG emissions

Double Dividend !!
7-8% Dairy
1-2% Drystock

Protected Urea – Yield Advantage

- 6 out of 7 years
- Pro Urea v Urea
- +13% more Grass
- More effective N
- In effect reduce N rate

Cost per kilo of N (€€€€!)

	Urea (46% N)	NBPT Pro Urea (46% N)	CAN (27%N)
kg N / t	460 kg N	460 kg N	270 kg N
€ / tonne	€900	€950	€700
€ / kg N	€1.96	€2.06	€2.59

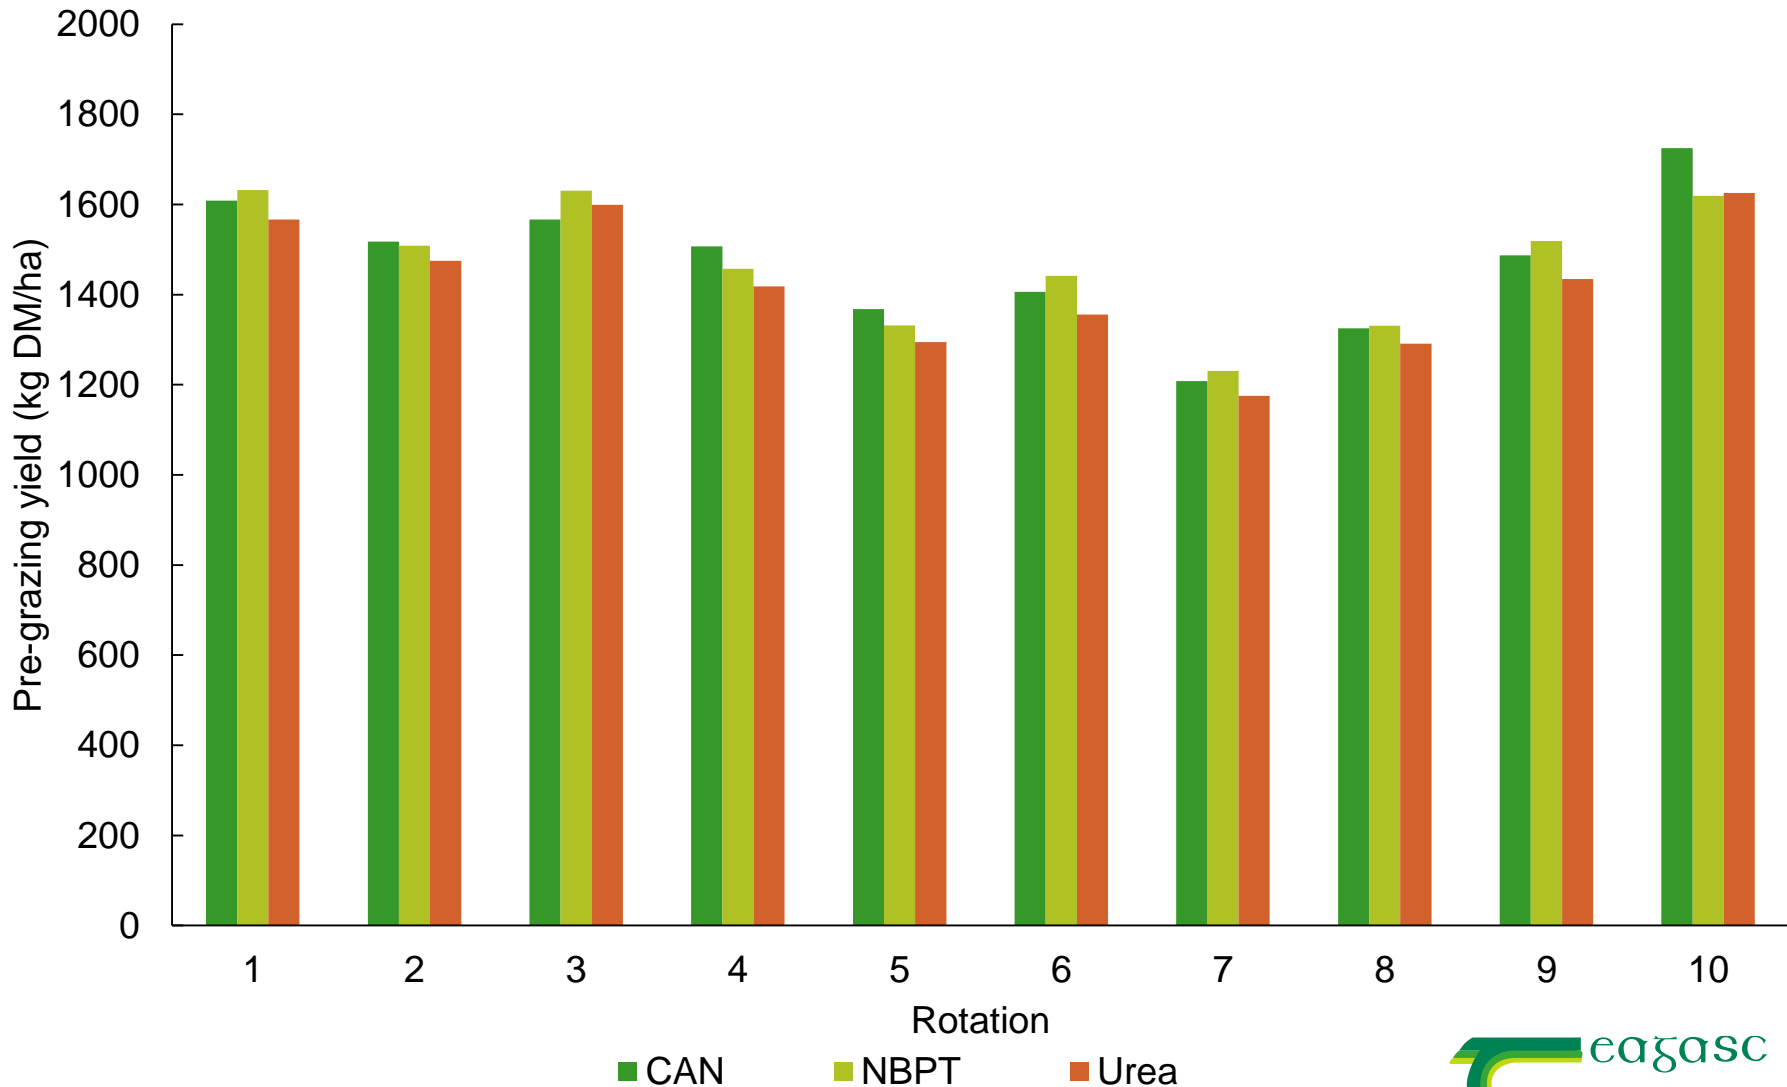

**Protected Urea 20% lower cost
Reduce Cost**

Protected Urea - Other Benefits

- Lime
 - No issue with timing of lime app.
- High N 46%
 - Spread more acres
- National inventory accounting

Summary of Grazing trials

Protected Urea Jan 2022

Aine Murray - Average of six site years, 9 cuts in Clonakilty, Moorepark (3 years), 10 cuts in Ballyhaise and 8 cuts in Athenry (2 year)

Spreading Protected Urea

1. Density – Urea less dense / lighter (won't travel as far from the spreading disc/veins)
2. More affected by windy conditions
3. 80% of granules 2 to 4 mm in size
4. Important to calibrate your fertiliser spreader
5. Spread up to 18 to 24 meters depending on conditions

Fertiliser Size (mm)		
<2mm	2.00 to 3.3mm	3.3 to 4.75
		

Fertiliser programme

- Grazing ground
- 1st round – 25 to 30 kg N/ha
 - Safest form of N
- Use throughout the season
 - Similar performance to CAN
- P & K's –
 - 2nd or 3rd round 18-6-12 + S
 - Pro Urea 46%

Fertiliser programme

■ Silage Fields

- Cattle slurry – Supply P & K's

- » 40% + 6% S

- 29 – 0 – 14 + 3.5% S

- » Supplies N, K & S

- » High P Soils / silage fields

- » Good product in last round – build soil K

Soil Health? Measured in long-term trial Duff, Forrestal & Brennan

No significant difference in bacterial or fungal population from fertiliser treatment
 Similar bacterial diversity

In Summary

- Protected urea delivers
 - Emission reductions
 - Extra productivity at lower rates of N
 - At lower costs €€€!
- Develop a fertiliser plan & plan fertiliser requirements for 2022
- Calibrate your fertiliser spreader
- Apply protected urea through the growing season & apply when conditions are suitable
